Senior product designer who turns complex, regulated processes into software people can get through quickly. 10+ years designing B2B2C products in healthtech, ticketing, education and hospitality. I run research, design the workflows and systems, then ship them in production React and Next.js, cutting clicks, duplicate data entry and admin time.

EXPERIENCE

Product Designer

Aug 2025 – Aug 2026

wawa fertility · London / Hybrid

- **Cut referral handling from 20–40 minutes per patient to a few minutes**, saving hours of admin a day and letting clinics shrink referral teams (one went from four staff to one), via a referral system with AI-assisted auto-ingestion.
- **Removed manual checking and data re-entry from regulatory reporting** across four regulators (PRISM, BORN, SART, ANZARD) with one model that adapts to any country and validates data upfront.
- **Greatly reduced admin and repeated data entry for every clinic** with one questionnaire builder whose answers feed straight into the clinical system, rolled out to all clinics seamlessly.
- **Helped sign three large clinics that were waiting on it** by designing wawa's first treatment planning system, which also simplified billing and stim sheets: standard templates cover 99% of cases and adapt easily for the tricky 1%.
- **Moved clinic setup from multi-day, in-person training towards self-serve** with a guided setup flow, chosen at the company all-hands as the template for all future implementations.
- **Cut extending a medication from 7+ clicks to one**, saving doctors' costliest time; one of many fixes cutting time for doctors, nurses and admin across workflows.
- **Cut developer time on smaller features from 1–2 days to around an hour** by moving design from Figma into the production codebase, so engineers just review a pull request.

Senior UX/UI Designer

Feb 2022 – Aug 2025

FIXR · London / Hybrid · incl. freelance 2025

- **Cited by 30% of high-revenue prospects as a deciding factor in switching to FIXR:** led end-to-end UX for Timed Entry, which became a major sales driver.
- Designed solutions tailored to each prospect's needs that **helped win enterprise organisers worth £100k+ a year on average** away from providers like Ticketmaster, opening up new verticals (museums, exhibitions, visitor attractions).
- **Made onboarding self-serve for all small and medium organisers**, freeing the sales team to focus on large accounts.
- **Helped FIXR land larger clients and grow revenue** by designing across the full product (event creation, checkout, scanning app, dashboards) and its design system.

SKILLS

DESIGN

Product & UX/UI design, design systems, prototyping, user research & discovery, interaction design, workflow design, AI-assisted features

ENGINEERING

React, Next.js, TypeScript, HTML/CSS, InstantDB

DATA

Data cleaning & wrangling, regex, spreadsheet modelling, analysis & charting

TOOLS

Figma, Linear, GitHub, Git, Claude Code

DOMAINS

B2B & B2B2C SaaS, healthtech, regulated & clinical software, multi-jurisdiction compliance, ticketing

EDUCATION

BA (Hons) Graphic Design – First Class
Canterbury Christ Church University
2010–2013
